

STEP 3

(Recommended for professional installers only.)

Attach the undermount clips. Position bowl so that reveal is equidistant.

Then on underside of countertop, drill holes for brass inserts of undermount clips.

Use a drill bit with stop block to avoid drilling through the top. for 1/2" countertop material, drill 3/8" deep holes. Use three clips on the long sides of the sink, and two clips on the short sides of the sink, or follow the Locations on the template that comes with the sink. Drill the holes 1" back from the cutout edge.

NOTE:

The undermount clip is 3/4" wide and 2-3/4" in length. The clip may be too long for some installations. If this is the case, make a brace out of wood or solid surfacing, butt it up against the sink, and, on site, screw it into the cabinet wall.

Measure the thickness of the brace and the cabinet wall so the screw does not go through to the other side of the cabinet. Instructions continued on back panel.

STEP 4

(Recommended for professional installers only.)

Install the sink. Clean the bottom of the countertop and the top flange (or lip) of the sink with denatured alcohol. Then apply a bead of silicone adhesive sealant to the top edge of the bowl flange and position the bowl in the countertop.

STEP 5

(Recommended for professional installers only.)

Tighten the clips. Tap in the brass inserts (anchors) for clips into the pre-drilled holes with the slotted ends first. Thread a wing nut onto a screw, up near the head.

With washer and slotted clip in place,

Tighten the screw to anchor the brass clip into the countertop material.

Repeat for each clip. Hand-tighten the wing nut to secure the sink bowl.

NOTE:

Do not fully tighten one clip at a time. Partially tighten a clip, then partially tighten the clip across from it. After each clip is partially tightened, repeat the process, fully tightening each clip. This ensures a secure installation and avoids damage to the sink.

NOTE FOR MARBLE OR GRANITE:

Use lead anchors which are glued in, rather than brass undermount clips.

Remove excess sealant from the inside lip of the bowl using appropriate cleaner on a clean rag.
